

Farm Name: _____ **Engine Block Heaters**

Date: _____

Note: Most engine block heaters only require about 2 hours to bring temperature up to acceptable level for starting in cold weather. Block heaters can range from 400 watts to 1800 watts. There can be substantial savings by using timers on engine block heaters. The timer can be portable, or the timer can be installed at a fixed location where a tractor is typically stored. A permanent timer and receptacle is an excellent choice where the tractor or skid loader is used on a daily basis.

Engine Block Heater Use:

List locations where block heaters are used and whether a timer is used.
Also note frequency of use of block heaters at each location.

Location: _____ block heater wattage _____ timer
Hours use per day _____ Days/year _____
